Started: Feb 2023
Completed: March 2023
Project Duration: 1 Month
Client: Location: Octavius
SVR Disciplines: Platform reinstatement, Cubis route install Tarmacking, integrated signage and line painting.

ABOUT THE PROJECT

As part of the 174065 Farncombe to Petersfield Re-signalling Platform Route Works Sunville Rail were awarded works to complete installation of 170m of 4way cubis ducting underneath Milford platform and installation of stakkabox chambers.

Then reinstate platform within a 10day blockade ready for access by the public once blockade has ended and train service resumed.

Sunville Rail completed the following works:

- Installation of platform signage within tarmac install.
- Overbanding.
- Thermostplastic lining.
- Re-instatement of tarmac along station platform following excavation for cable route under platform.
- Suction excavation to remove existing spoil from platform and remove from site to be environmentally disposed of.
- Provide MGF shoring equipment for excavated trenches.
- Installation of stakkabox chambers on platform
- Provide trench covers
- Provide pedestrian barriers and heras panels to segregate works.
- Provide all labour and plant
