Status:	COMPLETED
Started:	FEBRUARY 2021
Completed:	APRIL 2021
Project Duration:	2 MONTHS
Client:	SENCEIVE
Location:	KENT
SVR Disciplines:	REFOCUS CAMERAS, REPLACE SOLAR PANELS, SERVICING TILT SENSORS

PROJECT OVERVIEW

Sunville Rail & Sencieve were contracted by Network Rail to carry out the installation of Remote Condition Monitoring (RCM) systems at various sites along the Kent and Sussex routes.

ABOUT THE PROJECT

Sencieve had been requested to carry out the works of installing RCM equipment (Tilt monitors and cameras) to enable the monitoring of ground movements within the railway infrastructure. Sunville Rail were requested to supply safety critical staff to enable Sencieve to carry out maintenance works on the previously installed equipment. A Topographical Survey was carried out on each site, an NCD was produced and submitted to Network Rail. Sencieve Tilt Monitors were installed as per the design and as built drawings produced for each site.

We supplied them with a fully competent workers to supervise any of the works being carried out to ensure the works required was completed correctly and safely.

We also produced safety paperwork and carried out any line block planning required.
